

Pranesh Soni

SUMMARY

AI Product Owner / Product Manager with 3+ years delivering enterprise **Generative AI** products in regulated life sciences environments, from roadmap definition through production rollout. Track record across **LLM/RAG pipelines**, **responsible AI governance**, and **Agile/Scrum** delivery — translating complex business problems into AI-powered solutions that drive measurable **adoption** and **ROI** across global enterprise programs.

WORK EXPERIENCE

GenAI Product Owner — Cognizant Technology Solutions May 2023 – Present

- Defined **product vision, roadmap, and KPIs** for three enterprise GenAI products in a life sciences environment; conducted **market research and feasibility assessments** to inform strategic roadmap decisions.
- Led product discovery through **customer-facing stakeholder interviews** (40+ sessions), translating business challenges into AI-powered user stories, acceptance criteria, and product requirements.
- Owned end-to-end **AI product lifecycle** — ideation through deployment and **change management** — using **Agile/Scrum**; drove iterative model improvement through structured A/B evaluation cycles.
- Managed **risk, compliance, and responsible AI** requirements for AI systems — fairness, transparency, and data governance — aligned with life sciences regulatory standards.
- Prioritized and managed the **product backlog** in collaboration with engineers and business leadership; tracked **adoption KPIs and feature ROI** via analytics and user feedback to inform roadmap decisions.

PROJECTS

Doc Author – Clinical Functional Plan Workflow Automation (Syneos Health) (Jan 2026 – Present)

Leading **gap analysis and requirements gathering** across clinical functional plan templates (TMF, ICF, and others), replacing a fully manual, time-intensive authoring process. Designed two automation approaches: a **SQL-based data pipeline** auto-populating conventional templates from study-specific source data, and an **agentic GenAI workflow** using **LLM-based prompt engineering** to convert master ICFs into country-specific ICFs and auto-populate compliance checklists against regulatory citations (21 CFR, ICH GCP), with a **human-in-the-loop review** architecture for GxP-aligned validation.

Business impact: Scaled the SQL-based flow to 10+ plan types in active production, automating ~40% of data pointers and saving ~30 minutes per user per study, with data-entry errors reduced by an estimated 20–25%. ICF agentic flow achieving ~70% automation with review error margin reduced by ~80%.

SOP Assistant – AstraZeneca (July 2024 – Dec 2025)

GenAI assistant for global manufacturing site operators to retrieve Standard Operating Procedures (SOPs) across regulated production environments. Enables query-based retrieval of exact SOP IDs and page-level hyperlinks from thousands of documents in Veeva Vault, supporting both natural-language and direct SOP-number queries.

Business impact: Scaled in six phases across 25 global sites; achieved ~79% adoption with 85–90% retention. Reduced SOP lookup time from ~2 hours/week to ~20 minutes/week per operator, saving ~790,000 minutes weekly and generating an estimated £59k–£75k MAU.

Contracting Assistant – AstraZeneca (May 2023 – Dec 2024)

GenAI-powered assistant for contract and legal teams to support contract negotiation, review, and risk assessment with third-party vendors. Enables natural-language querying over enterprise contract templates using a RAG-based approach, returning context-aware responses with page-level document hyperlinks for traceability.

Business impact: Rolled out to ~550 users; achieved ~89% adoption and ~97% retention. Reduced contract review effort by 60–65% and eliminated manual comparison errors in contract analysis.

EDUCATION

Indian Institute of Management (IIM), Jammu

Masters in Business Administration (MBA) 2021 – 2023

Govt. College of Technology and Agriculture (CTAE)

Electrical Engineering 2015 – 2019

SKILLS

Certifications: SAFe PO/PM (SAFe 6), AWS Certified AI Practitioner

Product: Product Ownership & Roadmapping, Backlog Prioritization, Stakeholder Management, Agile & Scrum Delivery

AI & Data: Generative AI, LLMs, RAG Pipelines, NLP, Prompt Engineering, Responsible AI, Data Governance

Cloud & Platforms: AWS Services (S3, SageMaker, Bedrock)

Tools & Technology: JIRA, Confluence, Python
